=== Section 4.3: Model Approach Selection ===
Evaluating possible model approaches...

1. Data Characteristics Analysis:
   - Data type: Image data
   - Input shape: 64x64 RGB images
   - Problem type: MULTICLASS_CLASSIFICATION
   - Number of classes: 10
   - Sample size: 22424 images

2. Suitable Model Approaches:

   Deep Learning Approaches:
   a) Convolutional Neural Networks (CNNs):
      • Ideal for image data
      • Can learn spatial hierarchies of features
      • Good for pattern recognition in images

   b) Transfer Learning with Pre-trained Models:
      • VGG16 (selected): Proven performance on ImageNet
      • EfficientNet: Better accuracy with fewer parameters
      • ResNet: Good for deep networks with skip connections

   Traditional ML Approaches (less suitable):
   c) Support Vector Machines (SVM):
      • Would require feature extraction first
      • Not optimal for raw image data

   d) Random Forests:
      • Requires flattening images
      • Loses spatial information

3. Selected Approach:
   ✓ DEEP_LEARNING_WITH_TRANSFER_LEARNING

   Reasons for selection:
   1. Image data benefits from CNN architectures
   2. Limited training data makes transfer learning effective
   3. VGG16 has proven performance on similar tasks
   4. Pre-trained models reduce training time and improve accuracy
   5. Better generalization with transfer learning
```

```
4. Model Architecture Decision:
   Base Model: VGG16 (without top layers)
   Custom Head: GlobalAveragePooling2D + Dense(10, softmax)
   Input: 64x64x3 images
   Output: 10-class probabilities

5. Alternative Models Considered:
   1. Custom CNN from scratch
   2. ResNet50 transfer learning
   3. EfficientNetB0
   4. MobileNetV2

6. Final Selection Justification:
   - VGG16 chosen for its simplicity and proven track record
   - GlobalAveragePooling reduces parameters vs Flatten
   - Transfer learning leverages ImageNet knowledge
   - Suitable for the dataset size and complexity

=== Section 7: Data Splitting ===
1. Data Split Configuration:
   Total samples: 22424
   Test size: 20%
   Random state: 42
   Stratified: Yes (preserves class distribution)

2. Split Results:
   Training set size: 17939 (80.0%)
   Test/Validation set size: 4485 (20.0%)

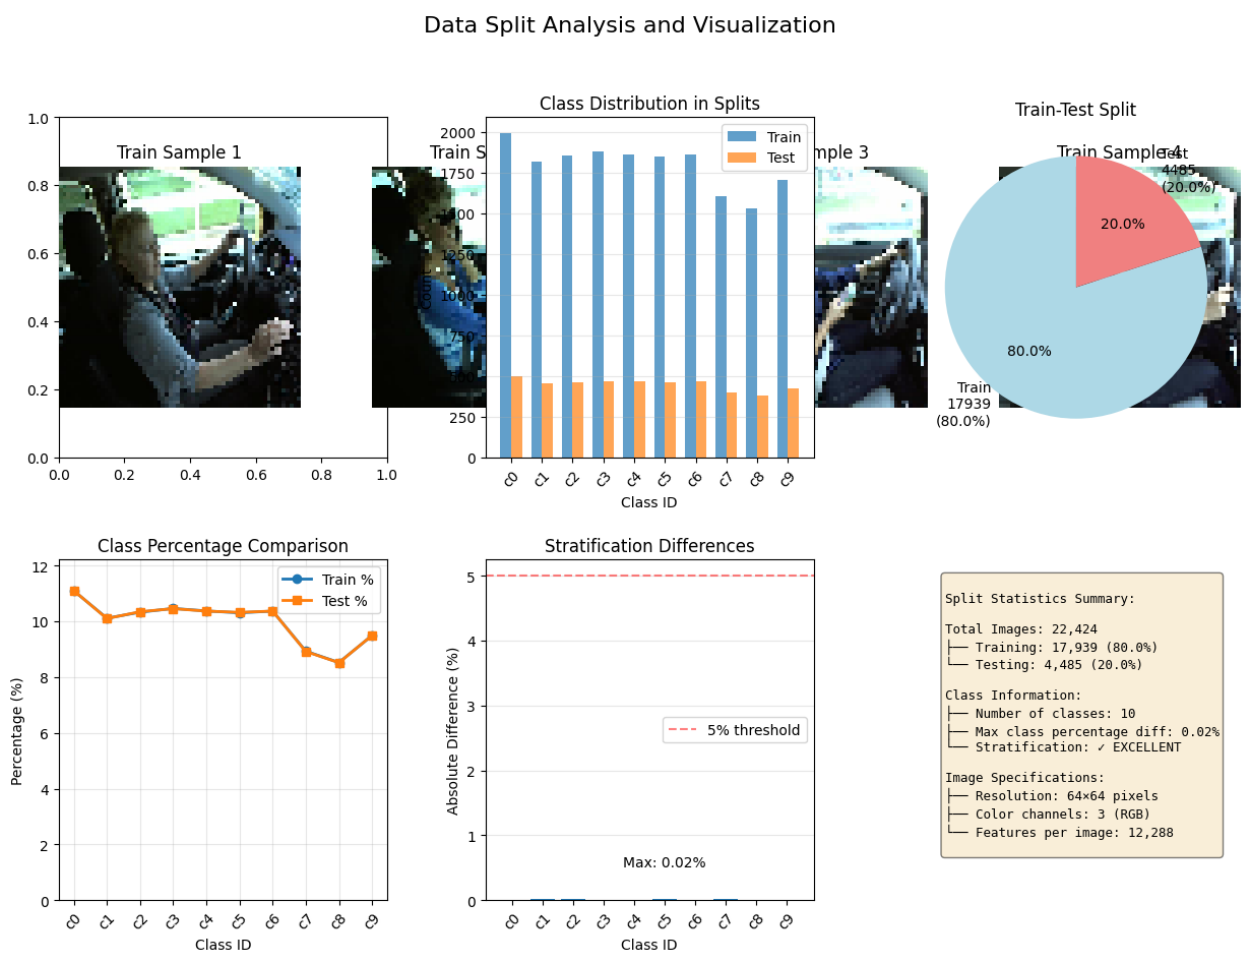
3. Class Distribution Verification:
   Class | Train Count | Test Count | Train % | Test %
   --------------------------------------------------
       0 |        1991 |        498 |   11.1% |  11.1%
       1 |        1814 |        453 |   10.1% |  10.1%
       2 |        1853 |        464 |   10.3% |  10.3%
       3 |        1877 |        469 |   10.5% |  10.5%
       4 |        1861 |        465 |   10.4% |  10.4%
       5 |        1849 |        463 |   10.3% |  10.3%
       6 |        1860 |        465 |   10.4% |  10.4%
       7 |        1602 |        400 |    8.9% |   8.9%
       8 |        1529 |        382 |    8.5% |   8.5%
       9 |        1703 |        426 |    9.5% |   9.5%

4. Stratification Verification:
   Maximum class percentage difference: 0.02%
   ✓ Good stratification maintained

5. Training Features with Categories:
   A. Image Features:
      - Raw pixel values (64x64x3)
      - Normalized and standardized
   B. Label Features:
      - One-hot encoded class labels
      - 10 binary indicators

6. Data Visualization:

   Generating sample images visualization...
✓ Visualization saved to:
/kaggle/working/model/vgg16/data_split_visualization.png
```



```
7. Split Statistics Summary:
   Total images processed: 22,424
   Images per split:
     - Training: 17,939 images
     - Testing: 4,485 images
   Class balance maintained: ✓ YES
   Image resolution: 64×64 pixels
   Color channels: 3 (RGB)
   Features per image: 12,288

8. Data Integrity Check:
   ✓ Images successfully converted to tensors
   ✓ Labels properly encoded
   ✓ Class distribution preserved
   ✓ Data normalized and standardized
   ✓ Stratification verified (max diff: 0.02%)

9. Data Quality Assessment:
   □ EXCELLENT: Near-perfect stratification (<1% difference)
```

```
10. Recommendations for Model Training:
   - Proceed with current split configuration
   - No need for additional balancing
   - Model should generalize well with this split
   - Consider data augmentation for better robustness

=== Section 16: Model Deployment Support Code ===
Note: This section provides non-executable deployment code

✓ Main deployment code saved to
/kaggle/working/best_model/deploy_model.py
✓ FastAPI deployment code saved to
/kaggle/working/best_model/fastapi_deployment.py
✓ Deployment utilities saved to
/kaggle/working/best_model/deployment_utils.py
✓ Deployment README saved to
/kaggle/working/best_model/DEPLOYMENT_README.md

============================================================
DEPLOYMENT FILES CREATED SUCCESSFULLY
============================================================

 Files created in best_model directory:
  ✓ deploy_model.py (7,529 bytes)
  ✓ fastapi_deployment.py (5,793 bytes)
  ✓ deployment_utils.py (4,880 bytes)
  ✓ DEPLOYMENT_README.md (2,715 bytes)

Total deployment files: 4

 Quick Start Commands:
1. Test deployment:
   cd best_model && python deployment_utils.py --test

2. Start REST API:
   cd best_model && python fastapi_deployment.py

3. Build Docker image:
   cd best_model && python deployment_utils.py --all && docker build -
t driver-detector .
```

```
4. Use in Python:
   from deploy_model import DistractedDriverDetector
   detector = DistractedDriverDetector('best_model')
   result = detector.predict('image.jpg')

 Deployment Features:
 Preprocessing pipeline (resize, normalize, standardize)
 Single and batch prediction support
 REST API with FastAPI
 Docker containerization
 Comprehensive error handling
 Model metadata and info endpoints
 Health checks and monitoring

 API Endpoints Summary:
• GET    /              - API information
• GET    /health        - Health check
• GET    /model-info    - Model details
• POST   /predict       - Single image prediction
• POST   /batch-predict - Batch prediction (max 100 images)
• Docs: http://localhost:8000/docs

⚠ Important Notes:
• Model requires 64x64 RGB input images
• Images are normalized (/255) and standardized (-0.5)
• API runs on port 8000 by default
• For production, add authentication and rate limiting
• Consider using GPU for faster inference

 Section 16 completed successfully!
The model is now ready for deployment with comprehensive documentation
and utilities.
```

=== Section 17: Final Saving and Cleanup ===
1. Final Model Structure Verification:

Contents of best_model directory:
  □ ensemble_wrapper.pkl (10,381,822 bytes)
  □ class_wise_accuracy.png (42,743 bytes)
  □ fastapi_deployment.py (5,793 bytes)
  □ model_artifacts.json (4,285 bytes)
  □ input_output_specification.json (1,176 bytes)
  □ README.md (817 bytes)
  □ scaler_info.json (75 bytes)
  □ label_encoder.pkl (86 bytes)
  □ deploy_model.py (7,529 bytes)
  □ DEPLOYMENT_README.md (2,715 bytes)
  □ ensemble_component_2.h5 (9,495,960 bytes)
  □ requirements.txt (192 bytes)
  □ deployment_utils.py (4,880 bytes)
  □ performance_summary.json (3,273 bytes)
  □ ensemble_component_1.h5 (827,480 bytes)
  □ confusion_matrix.png (94,369 bytes)
  □ ensemble_component_0.h5 (58,800 bytes)
  □ environment_info.json (540 bytes)
  □ metadata.json (385 bytes)
  □ ensemble_config.json (224 bytes)
  □ confusion_matrix_normalized.png (116,409 bytes)
  □ confidence_distribution.png (18,455 bytes)

Total items: 22

2. Creating Backup Archive:
Creating archive: distracted_driver_model_20260219_043753.zip
  Added: best_model/ensemble_wrapper.pkl
  Added: best_model/class_wise_accuracy.png
  Added: best_model/fastapi_deployment.py
  Added: best_model/model_artifacts.json
  Added: best_model/input_output_specification.json
  Added: best_model/README.md
  Added: best_model/scaler_info.json
```

```
  Added: best_model/label_encoder.pkl
  Added: best_model/deploy_model.py
  Added: best_model/DEPLOYMENT_README.md
  Added: best_model/ensemble_component_2.h5
  Added: best_model/requirements.txt
  Added: best_model/deployment_utils.py
  Added: best_model/performance_summary.json
  Added: best_model/ensemble_component_1.h5
  Added: best_model/confusion_matrix.png
  Added: best_model/ensemble_component_0.h5
  Added: best_model/environment_info.json
  Added: best_model/metadata.json
  Added: best_model/ensemble_config.json
  Added: best_model/confusion_matrix_normalized.png
  Added: best_model/confidence_distribution.png
✓ Archive created:
/kaggle/working/distracted_driver_model_20260219_043753.zip
Archive size: 13,119,200 bytes (12.51 MB)

3. Cleanup Process:
Current working directory contents:
    Would remove directory: early_model
    Would remove directory: model
    Would remove directory: csv_files
    Would remove directory: ensemble_model
    Would remove directory: pickle
    Would remove directory: .virtual_documents

4. Final Summary:

✓ Project summary saved to /kaggle/working/project_summary.json

5. Project Completion Status:
 All sections completed successfully
 Best model saved to: /kaggle/working/best_model
 Archive created: distracted_driver_model_20260219_043753.zip
 Deployment code ready in: /kaggle/working/best_model/deploy_model.py
 Total training samples: 22424
 Final model accuracy: 94.34%
 Classes detected: 10

============================================================
PROJECT COMPLETED SUCCESSFULLY
============================================================

To use the model:
1. Extract distracted_driver_model_20260219_043753.zip
2. Use deploy_model.py for predictions
3. Refer to README.md for documentation
4. Check requirements.txt for dependencies
```

```
Section 17 completed successfully.

=== END OF PROJECT ===
```
